MM74C373 • MM74C374
3-STATE Octal D-Type Latch • 3-STATE Octal D-Type Flip-Flop

General Description

The MM74C373 and MM74C374 are integrated, complementary MOS (CMOS), 8-bit storage elements with 3-STATE outputs. These outputs have been specially designed to drive high capacitive loads, such as one might find when driving a bus, and to have a fan out of 1 when driving standard TTL. When a high logic level is applied to the OUTPUT DISABLE input, all outputs go to a high impedance state, regardless of what signals are present at the other inputs and the state of the storage elements.

The MM74C373 is an 8-bit latch. When $\overline{\text{LATCH ENABLE}}$ is high, the Q outputs will follow the D inputs. When $\overline{\text{LATCH ENABLE}}$ goes low, data at the D inputs, which meets the set-up and hold time requirements, will be retained at the outputs until $\overline{\text{LATCH ENABLE}}$ returns high again.

The MM74C374 is an 8-bit, D-type, positive-edge triggered flip-flop. Data at the D inputs, meeting the set-up and hold time requirements, is transferred to the Q outputs on positive-going transitions of the CLOCK input.

Both the MM74C373 and the MM74C374 are being assembled in 20-pin dual-in-line packages with 0.300” pin centers.

Features

- Wide supply voltage range: 3V to 15V
- High noise immunity: 0.45 V_{CC} (typ.)
- Low power consumption
- TTL compatibility:
  Fan out of 1driving standard TTL
- Bus driving capability
- 3-STATE outputs
- Eight storage elements in one package
- Single CLOCK/$\overline{\text{LATCH}}$ $\overline{\text{ENABLE}}$ and OUTPUT DISABLE control inputs
- 20-pin dual-in-line package with 0.300” centers takes half the board space of a 24-pin package

Ordering Code:

Absolute Maximum Ratings(Note 2)

Voltage at Any Pin	−0.3V to V_{CC} + 0.3V
Operating Temperature Range (T_A)	
MM74C373	−55°C to +125°C
Storage Temperature Range (T_S)	−65°C to +150°C
Power Dissipation	
Dual-In-Line	700 mW
Small Outline	500 mW
Operating V_{CC} Range	3V to 15V
Absolute Maximum V_{CC}	18V
Lead Temperature (T_L)	
(Soldering, 10 seconds)	260°C

Note 2: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
